LABOUR, WAGES AND PRICES

1969

R. LAKIN
DEPUTY COMMONWEALTH STATISTICIAN

LABOUR, WAGES AND PRICES, 1969

PREFACE

This is the first issue of this bulletin which is to be published annually. Its purpose is to present a comprehensive summary of Tasmanian statistics in relation to Labour, Wages and Prices.

SYMBOLS AND USAGE

The following symbols where used mean:

- n.a. Not available.
- n.p. Not available for separate publication; included in totals where applicable.
 - p Preliminary—figure or series subject to revision.
 - r Figure or series revised since previous issue.
 - .. Nil or less than half the final digit shown, or not applicable.
 - Break in continuity of the series. (Where drawn across a column between two consecutive figures.)
 - M Male.
 - F Female.

A blank space in a table indicates that the figure is not yet available.

Values are shown in Australian dollars (\$) and/or cents (c).

Any discrepancies between totals and sums of components in tables are due to rounding.

LABOUR, WAGES AND PRICES, 1969

CONTENTS

LABOUR

1. EMPLOYMENT AND UNEMPLOYMENT

LABOUR

1. EMPLOYMENT AND UNEMPLOYMENT

Scope, Definitions and Explanatory Notes

Elements of Labour Force: Censuses 1947 to 1966

In censuses of population prior to 1966, people were asked to classify themselves as employers, employees, unemployed, etc. In the 1966 Census, people were invited to describe their activity in a specific week and the Statistician, using pre-determined definitions, classified them on the basis of their answers.

The 1966 Census questions asked whether the person: (i) Had a job or business of any kind last week (even if temporarily absent from it)? (ii) Did any work at all last week for payment or profit? (Unpaid helpers who worked were to answer yes). (iii) Was temporarily laid off by his employer without pay for the whole of last week? (iv) Looked for work last week? (Ways of 'looking for work' were specified on the census form.)

The 1966 labour force includes all persons answering yes to any one of the four questions. The unemployed consists of those answering no to questions (i), (ii) and (iii) and yes to question (iv).

The effect of the new approach in 1966 was to include additional persons in the labour force, particularly those working parttime. The term 'not at work' shown for 1947, 1954 and 1961 was more extensive in coverage than the term 'unemployed' and included also those temporarily laid off and those absent because of illness, accident or industrial dispute.

Wage and Salary Earners in Civilian Employment

The figures in the employment tables are based on data derived from the Population Census of June 1966 and on other later data from three main sources: (i) current pay-roll tax returns; (ii) current returns from government bodies; and (iii) some other direct current employment returns (e.g. for hospitals). The three current sources just specified cover most employment but a small unrecorded balance in the private sector has to be estimated.

Month-to-month changes shown by current returns are linked with the benchmark data (the June 1966 census) to derive the monthly estimate. At June 1966, employment totals obtained from the three current sources defined above represented about 85 per cent of the total number of employees in the industries covered, as determined by the census.

The table figures relate only to civilian wage and salary earners, not to the total labour force, and therefore exclude employers, self-employed persons, unpaid helpers and members of the defence forces. Also excluded, because of inadequate current data, are employees in agriculture and in private domestic service.

Current data supplied by reporting enterprises or establishments generally refer to persons on the pay-roll for the last pay-period in each month. Persons who are on paid leave, or who work during part of the pay-period and are unemployed or on strike during the rest of the period, are generally counted as employed. Those not shown on employers' pay-rolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Pay-roll tax returns are at present lodged by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals and similar types of organisations specifically exempted under the Pay-roll Tax Assessment Act 1941-1970).

Although the series measures the short-term trends in employment in the defined field reasonably well, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and pay-roll data, and changes in such factors as labour-turnover, multiple jobholding and part-time working all affect the trend over longer periods.

Registered Unemployed and Job Vacancies

The figures in the unemployment tables are taken directly from the Department of Labour and National Service monthly publication Monthly Review of the Employment Situation. The figures generally relate to the Friday nearest the end of the month.

Registered unemployed includes all persons who claimed, when registering with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. Also included are those referred to employers and those who may have obtained employment without notifying the Commonwealth Employment Service. Persons receiving unemployment benefit are necessarily included.

Registered job vacancies refer to vacancies which employers claimed were available immediately, or would be available by the end of the following calendar month.

The seasonally adjusted data in the area table have been derived by removing from the series the estimated normal seasonal variation. However, the effect of other influences has not been removed: in particular, any unusual irregular movement has not been removed. The seasonally adjusted series should not be regarded as 'definitive'; they must be treated with caution as being no more than useful indicators of movements, and as a useful aid to critical interpretation. For more details, see Seasonally Adjusted Indicators 1970 (Ref. No. 1.10) issued in June 1970 by the Commonwealth Statistician, Canberra.

TRADE UNIONS; INCIDENCE OF AWARDS; AND INDUSTRIAL DISPUTES

SCOPE, DEFINITIONS AND EXPLANATORY NOTES

Trade Unions

The figures shown in this section are prepared from a special collection of membership of trade unions at 31 December each year. Figures showing the numbers and membership of trade unions by industry groups are also shown but the table does not provide a precise classification. This is because in cases where the members of a union are employed in a number of industries, they have been classified to the predominant industry for the union concerned. Proportion of Total Wage and Salary Earners shows approximate percentages of wage and salary earners in employment who were members of Trade Unions. In comparing membership proportions prior to 1966 with figures for 1966 and later, allowance should be made for the fact that 1966 and later proportions are based on a new series of employment estimates dating from June 1966.

Surveys of the Incidence of Industrial Awards, Determinations, and Collective Agreements

The tables contain results of surveys conducted in April 1954, May 1963 and May 1968.

The results of the May 1968 survey are based on returns collected from:

- (i) a stratified random sample of most private employers subject to payroll tax (i.e. those paying more than \$400 a week in wages and salaries);
- (ii) all public hospitals and marketing boards;
- (iii) all Commonwealth government and State government departments and semi-government authorities; and
- (iv) a stratified random sample of local government bodies.

Definitions: Male and Female Employees refers to those who were on the payroll during the last pay period in May 1968. It includes managerial, executive and higher supervisory staff. Private Employees includes employees of private employers, public hospitals and marketing boards. Government Employees refers to employees of Commonwealth and State government departments, semi-government authorities and local government bodies. Commonwealth Awards refers to awards and determinations made by, and collective agreements registered with, the Commonwealth Conciliation and Arbitration Commission, the Public Service Arbitrator, the Coal Industry Tribunal and the Flight Crew Officers Industrial Tribunal. Tasmanian State Awards refers to determinations made by Wages Boards, and awards of the Public Service Tribunal. Employees Affected by Awards, etc. refers to employees whose wages, salaries and conditions of work are normally varied in accordance with variations in an award or determination made by, or a collective agreement registered with, a Commonwealth or State industrial authority. Other Employees refers to employees whose wages, a collective agreement registered with, a Commonwealth or State industrial authority.

Comparability of Results: The industry classification adopted for the May 1968 survey is that used for the 1966 Population Census. The May 1963 and April 1954 surveys were based on a different industry classification and for this and other reasons the results of the three surveys are not strictly comparable.

Industrial Disputes

Statistics relating to industrial disputes refer only to disputes of 10 man-days or more. Workers indirectly involved are those employees who, although not parties to the dispute, are thrown out of work at the establishment where the stoppage occurred.

Industrial dispute statistics are compiled from: (i) direct collections from employers and trade unions; (ii) reports of government departments and other authorities; (iii) State and Commonwealth authorities; (iv) trade journals, trade union and employer publications and newspaper reports. Particulars of some stoppages may be estimated therefore the statistics should be regarded as giving a broad measure of the extent of work stoppages. Disputes not settled at the end of the year are included in new disputes in the figures of the following year. A dispute involving workers in more than one industry group is counted once *only* in the item 'Number of Disputes' and is included in the industry group with the largest number of workers involved. However, workers involved, working days lost and estimated loss in wages and salaries are allocated to their respective industries.

2. TRADE UNIONS

TRADE UNIONS: NUMBERS AND MEMBERSHIP

	Yea	r Ende	d Dece	mber	a sheat awaz tana	Separate Unions	Members	Increase in Membership (a)	Proportion of Total Wage and Salary Earners (b)

WAGES AND HOURS

SCOPE, DEFINITIONS AND EXPLANATORY NOTES

Weekly Earnings and Hours Surveys

General: The first survey of Weekly Earnings and Hours was conducted by the Bureau of Census and Statistics in October 1962. Subsequent surveys have been conducted each year for the last pay period in October, or where abnormal circumstances affected the last October pay period, for the nearest normal pay period. The survey is based on a stratified random sample representing most employers paying payroll tax (i.e. those paying more than \$400 weekly in wages and salaries). The following are excluded from the survey: (i) employees in rural industry and private domestic service; (ii) employees of government and semi-government authorities; (iii) employees of religious, benevolent and similar organisations. Waterside workers, if hired under the new permanent employment scheme, are included; however, when employed on a casual basis they are excluded. The industrial classification used for all surveys, except the 1962 survey, is that used for the 1961 and 1966 population censuses. Only broad general comparisons can be made between the 1962 results and those for following years. The October 1965 survey was a special-purpose survey, restricted to weekly earnings of full-time adult males and its results have therefore been excluded from tables of weekly hours and earnings shown in this bulletin.

Scope of Information: In addition to obtaining data for the calculation of average weekly earnings, average weekly hours paid for, and average hourly earnings, the October 1966, 1967, 1968 and 1969 surveys obtained information on overtime and ordinary time earnings and hours for full-time employees (other than managerial, etc. staff). Figures of average overtime earnings and average overtime hours are the averages for all employees (in the specified category) represented in the survey whether or not they worked overtime. The survey figures do not show the average overtime earnings or hours of only those employees who worked overtime. Average weekly earnings, hours paid for and average hourly earnings are shown for adult and junior males and females.

Comparability of Results: The following are the main factors affecting comparability of survey results: (i) allocation of employees between 'managerial executive, professional and higher supervisory staff' and 'all other full-time employees' depends upon the employers' interpretation of the definitions; (ii) in the 1962, 1963 and 1964 surveys employees whose hours of work were not known were reported in managerial, etc. but in the 1966, 1967 and 1968 surveys employers were asked to report these employees in their correct classification; (iii) sampling variability; and (iv) the different industrial classification used for the 1962 survey.

Definitions:

- (i) Employees: male and female employees who worked for the last pay period in October.
- (ii) Adults: all employees 21 years of age and over and employees under 21 receiving the adult rate for their occupations.
- (iii) Juniors: employees under 21 not paid at the adult rate for their occupation.
- (iv) Full-time employees: those employees who normally work 30 hours or more a week and received pay in the last pay period in October.
- (v) Part-time employees: those employees who normally work less than 30 hours a week and received pay in the last pay period in October.
- (vi) Other than managerial, etc. staff: comprises minor supervisory employees, leading hands, clerical and office staff and ordinary wage employees. It excludes managerial, etc. staff who were not further defined.
- (vii) Weekly earnings: gross earnings, before taxation and other deductions have been made, for the last pay period in October. Includes overtime earnings, shift allowances, penalty rates, commission and similar payments and that part of sick, annual or long service leave taken during the specified pay period. Includes one week's proportion of payments made on other than a weekly basis. Retrospective payments are excluded.
- (viii) Overtime earnings: that part of gross weekly earnings for hours paid for in excess of award, standard, or agreed hours of work.
- (ix) Ordinary time earnings: that part of gross weekly earnings paid for award, standard or agreed hours of work. Includes shift allowances, penalty rates, commissions, bonuses, incentive payments and that part of paid annual or other leave relating to these hours.
- (x) Weekly man-hours paid for: sum of man-hours for which payment was made. Includes ordinary time hours, overtime hours, paid standby or reporting time and that part of paid annual sick or long service leave and paid holidays taken during the specified week.
- (xi) Overtime hours: hours in excess of award, standard or agreed hours of work.
- (xii) Ordinary time hours: award, standard or agreed hours of work. Includes man-hours of standby or reporting time which are part of standard hours of work and that part of paid annual, sick and long service leave taken during the specified week.

Average Weekly Earnings per Employed Male Unit

The figures relate to civilians only. They are derived from particulars of employment and wages and salaries recorded on pay-roll tax returns, from other direct collections and from estimates of the unrecorded balance. Particulars of wages and salaries are not available for males and females separately on pay-roll tax returns. However, average weekly earnings have been calculated in terms of male units, that is, the divisor is male employees plus 55 per cent of female employees. This proportion was derived from the estimated ratio of female to male earnings in Australia. Quarterly figures are subject to seasonal influences; special payments, bonuses and proposure of the helidays to add to raise. December Quarterly figures and decrees March Quarter figures. and prepayment for holidays tend to raise December Quarter figures and depress March Quarter figures.

These figures are not comparable with those derived from the annual October Survey of Weekly Earnings and Hours (see preceding section Weekly Earnings and Hours). Average weekly earnings per employed male unit are estimates of the actual average weekly earnings of all wage earners and salaried employees.

Weekly and Hourly Wage Rates

Wage rates used to compile the index are the minimum rates prescribed for particular occupations in Commonwealth or State awards and in registered (and in some cases unregistered) agreements. For some occupations, general loadings are included; however, loadings not applicable to all workers in a specified award occupation are excluded from the wage rates. The rates are normally referred to as 'weighted average minimum weekly rates'.

The minimum wage rates used in compilation of the indexes are for representative occupations within each industry. They are derived from representative awards, determinations and agreements in force at the end of each period.

Indexes are based on the occupational structure existing in 1954. The appropriate weights were derived from sample surveys made in that year. Occupations in new or expanding industries are normally covered by existing awards. However, when a new award is made to cover a new industry this award is incorporated into the index if the number of employees warrants such action. The occupations included in the indexes are therefore representative of the current situation and are comparable over a long period.

The amounts should not be regarded as actual current averages but as indexes expressed in money and hour terms, indicative of trends. The amounts do not measure the relative level of wage rates or hours as between States.

Invalid Comparison: The weighted average minimum weekly wage rates are not comparable with average weekly earnings per employed male unit. For an explanation of the latter concept see the previous section.

Commonwealth Awards, etc.: Include awards of, or agreements registered with, the Commonwealth Conciliation and Arbitration Commission and determinations of the Commonwealth Public Service Arbitrator.

State Awards, etc.: Include awards or determinations of, or agreements registered with, the Tasmanian Wages Boards and the Tasmanian Public Service Tribunal.

Basic Wages

The concept of a 'basic' or 'living' wage was common to wage rates determined by industrial authorities in Australia before an award of the Commonwealth Conciliation and Arbitration Commission in June 1967 introduced the 'total wage' concept. (Tasmanian State Wages Boards, however, have retained the basic wage in their determinations.)

Total Wages

The June decision of 1967 handed down by the Commonwealth Conciliation and Arbitration Commission abolished the concept of the basic wage in Commonwealth Awards. The basic wage and margins were replaced by a total wage which became operative from the first pay period commencing on or after 1 July 1967. The minimum wage concept (see following section) introduced by the Commission in July 1966 was retained.

Minimum Wages

In its July 1966 decision, the Commission ordered that the *minimum wage* paid under the Metal Trades award should include a margin of \$3.75 above the appropriate basic wage. The minimum wage was expressed as a total wage. In July 1967 Tasmanian Wages Boards adopted a similar concept.

Minimum Rates of Wages and Prescribed Hours of Work for Specified Occupations

These have been taken from awards, determinations and agreements of industrial tribunals and from unregistered agreements operative at 31 December 1969. The wage rates and hours are generally those applicable to the capital cities, but where this is not so the area of the State to which they apply is indicated in a footnote. Where two or more rates are quoted in an award, determination or agreement for a particular occupation, only the lower (or lowest) rate for each occupation has been quoted. In the majority of cases, the rates quoted are those payable for a full week's work (excluding overtime). Where it is not possible to quote such rates, hourly rates have been shown. For most occupations the hours constituting a full week's work (excluding overtime) are 40; where the hours prescribed differ from 40 they are shown in the footnotes to the table.

May			26.80	20.10	1966 11 July (g)			33.40	25.05
August (b)			 27.20	20.40	1967 July (h)			34.40	26.05
959 June (g)			 28.20	21.15	1968 25 October			35.75	27.40
961 July (g)			 29.40	22.05	1969 19 December			36.80	28.20

⁽a) Rates are operative from the beginning of the first pay period commencing in the month shown or commencing on or after the date shown.

(b) Rate declared subsequent to an inquiry.

Female rate increased to 75 per cent of the male rate.

5. TOTAL WAGE

COMMONWEALTH TOTAL WAGE: INCREASES IN WEEKLY WAGE RATES

	Date C	perativ	те (a)		Adult Males	Adult Females	
1967 1 July 1968 25 October				 	 \$1.00 \$1.35	\$1.00 \$1.35	
1969 19 December				 	 3 per cent	3 per cent	

⁽a) Operative from the beginning of the first pay-period on or after the date shown.

6. MINIMUM WAGES AND PRESCRIBED HOURS OF WORK

MINIMUM WAGE, ADULT MALES, WEEKLY RATES: COMMONWEALTH AND TASMANIAN **AWARDS**

(\$)

Comn	nonwealth A	wards: Hob	part	State Wages Boards' Determination	ions
Date Opera	tive (a)		Amount	Date Operative (a)	Amount
1966 11 July (b) 1967 1 July 1968 25 October 1969 19 December			37.15 38.15 39.50 43.00	1967 July	38.15 40.45 43.00

(a) Rates are operative from the beginning of the first pay-period commencing on or after the date shown.

⁽d) Automatic quarterly adjustments discontinued.
(e) Introduction of the total wage concept into Commonwealth awards and basic wage and margins eliminated.
(f) No provision exists in Tasmanian industrial legislation for the declaration of a State basic wage. Prior to February 1956 most Tasmanian Wages Boards adopted Commonwealth basic wage rates.

⁽q) Most Tasmanian Wages Boards adopted Commonwealth basic wage rates from the month or date shown.
(h) State Wages Boards retained the basic wage concept after basic wages and margins were eliminated from Commonwealth awards.

⁽b) In its decision of 8 July 1966 in the Basic Wage, Margins and Total Wages Cases of 1966, the Commonwealth Conciliation and Arbitration Commission inserted a provision in awards prescribing a minimum wage. The weekly rate of minimum wage prescribed for Hobart was the existing basic wage \$33.40 plus \$3.75.

(a) Unless otherwise specified rates are for a 40-hour week. Where two or more awards exist for a single occupation the lowest rate is shown.

(b) Rates and hours applicable throughout the State.

(c) 44 hours.

(e) Shearers' hours are 40 a week; shed hands' hours are the same as those for shearers, with such additional time as may be necessary to finish picking up fleeces, etc. Should the time engaged picking up, etc. exceed 30 minutes a day, all time thereafter is paid as overtime. Rates shown are 'not found' rates. Found rates were \$12.54 a week less in December 1969 and December 1968, as overtime. Rates shown are not lottle lates a week less in December 1968, \$12.02 a week less in December 1965, and \$10.00 \$12.22 a week less in December 1967, \$12.02 a week less in December 1965, and \$10.00 a week less in December 1964.

(1) Silver-lead-zinc mining. Includes lead Bollas.

(g) Day work rates. Night work rates (for 38 hour week) were \$4.70 higher in December 1964 and 1965 and \$6.70 higher in subsequent

years than day work rates.

(h) The rates are weekly equivalent of hourly rates. They include allowances for excess fares and travelling time, sick leave, statutory

holidays, following the job, etc. 78 hours a fortnight. Rates of pay are for casuals on other than special cargo work.

(b) Local or city.

(c) Local or city.

(d) Rates of wage represent the weekly cash payment where board and lodging are not provided.

⁽c) 36 hours.

⁽d) Rates of wage represent the weekly cash payment where board and lodging are not provided.

PRICES AND PRICE INDEXES

SCOPE, DEFINITIONS AND EXPLANATORY NOTES

Consumer Price Index

The Consumer Price Index is a quarterly measure of variations in retail prices for goods and services representing a high proportion of the expenditure of wage-earner households. The weighting pattern relates to estimated aggregates of wage-earner house-consumer (or retail) prices indexes are sometimes lossely called 'cost of living indexes' and are thought to measure changes in the price indexes. Changes in prices of goods and services are, however, an important part of the change in cost of living and this part is measured by consumer (or retail) price indexes.

The Consumer Price Index covers a wide range of commodities and services arranged in five major groups:

- (i) food;
- (ii) clothing and drapery;
- (iii) housing;
- (iv) household supplies and equipment; and
- (v) miscellaneous.

These groups do not include every item of household spending. Prices are collected regularly for specified quantities and qualities of a large and representative selection of commodities and services.

Substantial changes have occurred in consumer usage and patterns of expenditure since 1950. In order to keep the weighting pattern representative of current expenditure, it has been necessary to construct indexes with additional items and changes in the weighting pattern at intervals, rather than to maintain an index based on a list of items and set of weights that remained unchanged throughout the whole period covered.

For the six State capital cities, six series for short periods (i.e. (i) from September quarter 1948 to June quarter 1952; (ii) from June quarter 1956 to March quarter 1960; (iv) from March quarter 1960 to December quarter 1963; (v) from December quarter 1963 to December quarter 1968; (vi) from December quarter 1968) have been constructed and linked to form a continuous retail price index series.

During each period between links, the items and weighting pattern remain unchanged. At each time of linking, the weighting pattern is altered and new items (mainly ones that have become significant in household expenditure) are introduced. The process of linking ensures that the index reflects only price variations and not differences in cost of the old and new lists of items. The introduction of new items and weights by linking does not, of itself, raise or lower the level of the index.

The weighting of the sixth linked index was derived from analyses of data from the Population Census of 1966, from recent statistics and estimates of production, consumption, etc. and from several special purpose sample surveys.

A detailed description of the Consumer Price Index, including the weighting pattern is contained in the Labour Report No. 54, 1968 and 1969.

Wholesale Price Indexes

Materials Used in Building other than House Building: This index measures changes in prices of selected materials used in the construction of buildings other than houses and 'low-rise' flats (in general, those up to three storeys). It includes 72 items, combined in eleven groups, in addition to an 'All Groups' index. Although the selected materials (or many of them) are also used in house (and low-rise flat) building, in building repair, maintenance and alteration work, and in 'engineering construction' work (e.g. projects such as roads, dams, bridges and the like), the weighting pattern of the index, being designed for the specific purpose mentioned at the beginning of this paragraph, is not applicable to these other activities of the construction industry. In addition, since the weights are based on an average materials usage over a range of types of building within the defined area (building other than house building), the index is not necessarily applicable to any specific building or type of building included in that area. The index is a fixed-weights index and is calculated by the method known as 'the weighted arithmetic mean of price relatives'. The items and weights were derived from reported values of materials used in selected representative buildings constructed in or about 1966-67. The single weighting pattern relates to the whole of Australia, and is applied (with minor exceptions) in calculating indexes for each State capital city. Prices are collected as at the mid-point of the month to which the index refers, or as near thereto as practicable. They relate to specified standards of each commodity and are obtained in Hobart from representative suppliers of materials used in building. There are, however, some exceptions to the use of local prices; the whole of the group 'Electrical Installation Materials' and the majority of the items in the group 'Mechanical Services Components' are based on Sydney and Melbourne price series.

Basic Materials and Foodstuffs: Details are available on an Australian basis only. The weighting system used in this index is based on estimates of the average annual consumption of included commodities in Australia from 1928-29 to 1934-35. The validity of the weighting and the representativeness of the index have become increasingly affected by changes in usage and in industrial structure. New series of wholesale price index numbers relating to materials used and articles produced by defined areas of the economy are being developed. The first of these indexes, the 'Wholesale Price Index of Materials used in Building other than House Building', was issued on 23 April 1969. Work continues on the preparation of two further measures, relating to materials used in house building and in manufacturing industry respectively. (Publication of the former index commenced in November 1970; however, results were not received in time for inclusion in this Bulletin.) Taken together, these first three series will, to a considerable extent, constitute a currently representative replacement for the 'Wholesale Price (Basic Materials and Foodstuffs) Index', which in the constitute a currently representative replacement for the 'Wholesale Price (Basic Materials group has been largely supermeantime will continue to be published. However, it should be noted that the Building Materials group has been largely supermeantime will continue to be published. However, it should be noted that House Building'. (See preceding section.) A list of seded by the 'Wholesale Price Index of Materials used in Building other than House Building'. Index is set out in Labour Report No. 53, 1967.

Export Price Index: The purpose of the Export Price Index is to provide monthly comparisons over a limited number of years of the level of export prices of selected items, making no allowance for variations in quantities exported. The price series used in the index relate to specified standards for each commodity and in most cases are combinations of prices for a number of representative index relate to specified standards for each commodity and in most cases are combinations of prices for a number of representative grades, types, etc. As nearly as possible, prices used are f.o.b. at the main Australian ports of export. There are 29 items in the grades, types, etc. As nearly as possible, prices used are f.o.b. at the main Australian ports of export. There are 29 items in the grades, types, etc. As nearly as possible, prices used are f.o.b. at the main Australian ports of export. There are 29 items in the grades, types, etc. As nearly as possible, prices used are f.o.b. at the main Australian ports of export. ⁽a) Meat prices are averages for the quarter ending with the month shown.
(b) The table units are not necessarily those for which the original price data were obtained; in such cases, prices have been calculated for the table unit.
(c) Unit currently in use.
(d) Averages are for the month shown.
(e) Prior to January 1965 'bacon rashers, 1 lb'.

3. WHOLESALE PRICE INDEXES

⁽a) Figures are shown to one decimal place to avoid distortions that would occur in rounding the index numbers to the nearest whole number. Figures after the decimal point possess little statistical significance.

⁽b) Whole of group 'Electrical Installation Materials' and the majority of items in group 'Mechanical Services Components' are based on Sydney and Melbourne price series.
